

Weekly Report

Lu Junhua

December 15, 2014

Work has been done

1. Have learned the basic of scala syntex. I came across some problems in deploy SPARK, because I'm still not familiar with Linux and Shell programming,so I should learn something about this topic.
2. We had a meeting about the Gongan Data. And I had write an email to He Yinghua to confirm the changes of the code or model.The parameters need change, and we should revise the model temporarily to test the validity of the code. And I am still reading about the prototype of duration model, which is the essential of this prediction model.

Work to be done

1. I will modify the R code because there is something new to change. I will give feedback to teachers in time.
2. I may take part in netease group to make the data we need in order, using SQL. Shen Yandi has chosen the attribute we need, and needs data cleaning and processing.
3. If I have spare time, I will read more models of statistical learning.
